## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over the disclosed prior art on pages 1-2 in the instant specification, in view of Yamaazaki et al. the disclosed prior art recognizes that the claimed contaminants can be heated insitu in a plasma chamber but the heating takes , "a significant amount of time". See jBackground of th Invention, last two paragraphs. The patent to Yamazaki et al is applied for teaching that it is conventional to heat wafers using microwave s, in a non plasma producing atmosphere, and this heating is efficient and direct. In view of this teaching it pousd have been obvious to modify the disclosed prior art to use microwaves in lieu of conventional heaters, since such modification would produce a faster and more efficient heating of wafers. Note that the materials and contaminants set forth in the claims are taught in the disclosed prior art in the instant specification.

**Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Rosenwaig et al, Tsuchihashi et al and Frankel et al are cited for disclosing microwave heating and drying of wafers.
